

**February 2008
Sustainability Committee**

The committee had a lengthy discussion about ways the definition of Sustainability could be operationalized in the division. There were two primary strategies that were employed.

- 1) Create a visual representation of the working definition of Sustainability for the Division.
- 2) Write two informational pieces to appear in Updates for the Division on current practices in Sustainability.

Several group members volunteered to provide leadership to form a sub-group to create the visual representation. All members of the group were to return to their units and draft a list of current practices already underway that meet our definition of Sustainability.
